Un/acceptable Paraphrasing

The original passage:

Students frequently overuse direct quotation in taking notes, and as a result they overuse quotations in the final [research] paper. Probably only about 10% of your final manuscript should appear as directly quoted matter. Therefore, you should strive to limit the amount of exact transcribing of source materials while taking notes. Lester, James D. Writing Research Papers. 2nd ed. (1976): 46-47.

A legitimate paraphrase:

In research papers students often quote excessively, failing to keep quoted material down to a desirable level. Since the problem usually originates during note taking, it is essential to minimize the material recorded verbatim (Lester 46-47).

A plagiarized version:

Students often use too many direct quotations when they take notes, resulting in too many of them in the final research paper. In fact, probably only about 10% of the final copy should consist of directly quoted material. So it is important to limit the amount of source material copied while taking notes.verbatim (Lester 46-47).

The original passage:

A plagiarized version:

Students often use too many direct quotations when they take notes, resulting in too many of them in the final research paper. In fact, probably only about 10% of the final copy should consist of directly quoted material.

What is Plagiarism?

- Plagiarism is the use of someone else's ideas or language without acknowledging that we did not create them.
- It applies to ideas, words and unusual structures regardless of where we find them — in a book, on a webpage, in an email.
- When including person's information or wording in a document, we must acknowledge the source and include a citation that will tell your readers where we obtained it
- Plagiarism is sometimes seen as intellectual theft — plagiarism.
